

# Chacewater School – LEAP Into Learning - Spring 2 – Buds

## SCIENCE: PLANTS

What I might already know: names of common wild and garden plants, including deciduous and evergreen trees.

What we will be learning:

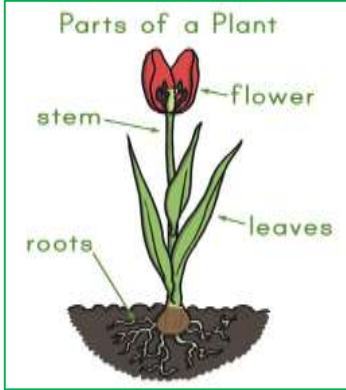

Plants need **light**, **water** and **warmth** to **grow** and stay **healthy**.

Light and warmth + water = a healthy and well grown plant

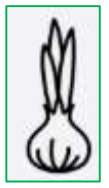

What do plants need to grow?

What is germination?

**Germination** is the name for when a plant starts to grow. You need warmth and water but **no** sunlight for germination to begin.

Plants grow from bulbs or seeds

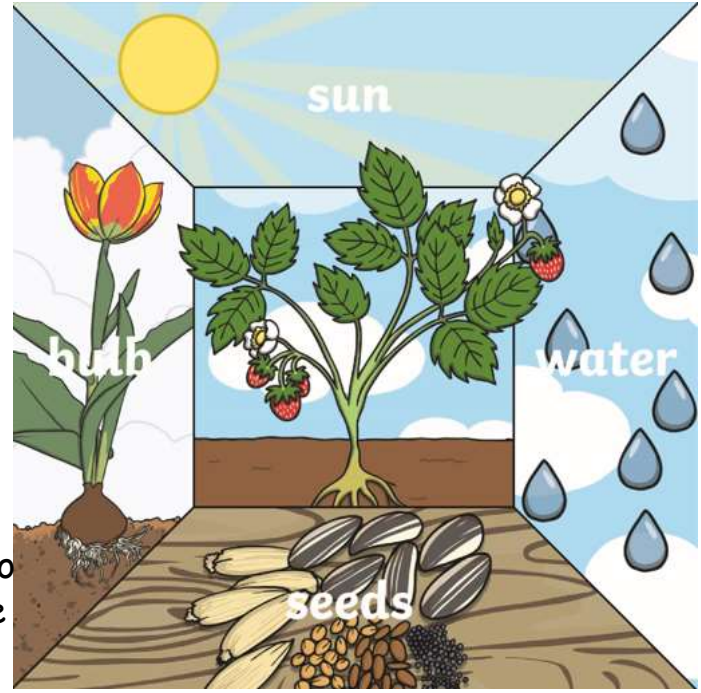

What happens to my bulb/seed as it grows?

**Bulbs** and **seeds** have a store of food so **do not** need light to grow.

**Seeds** have a tough layer on the outside to protect the plant (the seed coat).

**Flowers** make seeds to make more plants (**reproduce**).
